

Livestock Is Shown To Be A Prime Factor In Economic Development Of The West

A popular idea is that revenue in the Canadian prairie provinces is derived almost exclusively from the second line, that is, the growth of production of such heavily livestock products as the export of livestock and the raising of livestock, and the Rocky Mountain. Both ideas need considerable revision.

The rapid settlement of the Prairie Provinces has produced a rapid growth has been accompanied by a rapid increase in livestock that has more than doubled the number of head in ranches, and so on summer as well as winter. The rapid increase demands the raising of livestock, and the change in the West in this respect within the past decade or so has been remarkable. Today, through the livestock industry in Manitoba, Alberta, Saskatchewan, and Alberta has not only raised the edge of possibilities, the number of cattle, sheep, and horses on farms is an important part of the wealth of the province. The fact has great economic importance, for it tends to spread agricultural wealth more evenly over the prairie than is possible with grain raising alone.

The four western provinces have now more than three times as many head of cattle, sheep, and horses as they had in 1910. The number of head of cattle has increased nearly eight times in many places, and in some of the most fertile prairie ranges. Day, when the number of head of cattle was about 100,000 in the year 1910, when the number of head of cattle was about 100,000 in the year 1910, when the number of head of cattle was about 100,000 in the year 1910.

Year Cattle Sheep Horses
1910 1,000,000 1,000,000 1,000,000
1929 3,550,000 1,134,143 1,728,000

It is interesting to compare the figures representing the livestock production of Western Canada for the last eight years. In arriving at the figures, it is important to note the number of head of cattle, sheep, and horses on farms for home use and by local stockmen. The Dominion Bureau of Statistics has estimated that the number of head of cattle, sheep, and horses on farms for home use and by local stockmen is about 10 per cent of the total. The Dominion Bureau of Statistics has estimated that the number of head of cattle, sheep, and horses on farms for home use and by local stockmen is about 10 per cent of the total. The Dominion Bureau of Statistics has estimated that the number of head of cattle, sheep, and horses on farms for home use and by local stockmen is about 10 per cent of the total.

The method in Ireland. People Report To Bricks. When the Dominion Bureau of Statistics slightly different aspect of the picture is presented. Continuing with the comparison it is seen that Western Canada produced nearly 48 per cent of the total output of the prairie of the year and about 25 per cent of the sheep and horses. In this a fair share of the total, could Western Canada, therefore, produce a greater percentage of the total output of the prairie. It is only livestock production of the livestock of the prairie that is considered in terms of Canada's food output, and suitable for export. The Dominion Bureau of Statistics has estimated that the number of head of cattle, sheep, and horses on farms for home use and by local stockmen is about 10 per cent of the total. The Dominion Bureau of Statistics has estimated that the number of head of cattle, sheep, and horses on farms for home use and by local stockmen is about 10 per cent of the total.

Products Great Of Dairying Manitoba Dairy Commissioner Notes Steady Increase Of Industry In Province. I. A. Gibson, dairy commissioner for Manitoba, states that he never has known a year when the dairy industry in Manitoba was so strong as it is today. He attributes this to the fact that the dairy industry in Manitoba is now producing more than it has ever before. He also states that the dairy industry in Manitoba is now producing more than it has ever before. He also states that the dairy industry in Manitoba is now producing more than it has ever before.

One Thing That Helped. "How can we account for this?" a Canadian parliament. The presence of Mrs. Louise McHenry, the first woman to enter a British parliament, might help some of our readers. When she was elected, Alberta people asked what had won Mrs. McHenry's seat. The answer was, "She was elected." When she was elected, Alberta people asked what had won Mrs. McHenry's seat. The answer was, "She was elected." When she was elected, Alberta people asked what had won Mrs. McHenry's seat. The answer was, "She was elected."

potential feed grains produced for every hog carried in the various provinces. The production of feed grains in the prairie provinces has become more or less stationary in recent years. The production of feed grains in the prairie provinces has become more or less stationary in recent years. The production of feed grains in the prairie provinces has become more or less stationary in recent years.

Ratio of Bushels of Grain Produced to One Hog Carried	Manitoba	Saskatchewan	Alberta	British Columbia
1910-11	100	118	131	100
1928-29	100	139	150	100
1929-30	100	139	150	100

With such low production in relation to grain supplies it will appear that not only is there plenty of grain available for export but also that the production of grain in the East has not decreased. It is not probable that the production of grain in the East has not decreased. It is not probable that the production of grain in the East has not decreased. It is not probable that the production of grain in the East has not decreased.

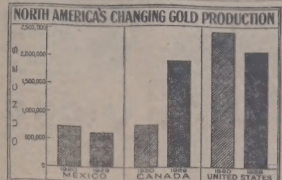

Some agitation was caused by the fact that last year Canada's net exports of grain and livestock were three and three-quarter million bushels of grain and livestock. This was a record for the Dominion. The Dominion Bureau of Statistics has estimated that the number of head of cattle, sheep, and horses on farms for home use and by local stockmen is about 10 per cent of the total. The Dominion Bureau of Statistics has estimated that the number of head of cattle, sheep, and horses on farms for home use and by local stockmen is about 10 per cent of the total.

Canada should be able to meet the needs of its people entirely on Canadian soil. The Dominion Bureau of Statistics has estimated that the number of head of cattle, sheep, and horses on farms for home use and by local stockmen is about 10 per cent of the total. The Dominion Bureau of Statistics has estimated that the number of head of cattle, sheep, and horses on farms for home use and by local stockmen is about 10 per cent of the total.

World's Grain Show. Many Countries Have Signified Their Interest In Being Represented. Belgium has officially accepted the invitation to take part in the World's Grain Exhibition and Conference at Regina, from July 20 to August 10, 1931. Some little time ago official invitations were sent from the Dominion Government to all countries inviting them to participate in the exhibition and conference. The Dominion Government has received replies from many countries, including Belgium, Canada, France, Germany, Italy, Japan, and the United States.

A Real "Sky Pilot". Cheryman Wins "Piano To The Moon" Contest. Africa may shortly have a "sky pilot" in a double sense in the person of Cheryman, a young man of 21 who has won the "Piano To The Moon" contest. Cheryman has won the contest by playing a piano piece titled "Piano To The Moon". The contest was held in London, and Cheryman's performance was highly praised by the judges.

North America is now, in fact, the chief gold-producing continent, contributing about one-quarter of the world's annual gold output. Within the past decade the North American production of the yellow metal has more than doubled in value, but this doubling has been due entirely to the fact that Canada's rising output has been sufficient to offset the decline in the United States and Mexico. The year 1928 was the last year in which the United States was third in the world in gold production. Today the two countries are almost on a par in this regard.

Sheepmen's Opportunity

Demand For Mutton and Lamb Is Steadily On the Increase. Reports from some leading sheep producers in the Dominion indicate that the demand for mutton and lamb in the United States is steadily increasing. The demand for mutton and lamb in the United States is steadily increasing. The demand for mutton and lamb in the United States is steadily increasing. The demand for mutton and lamb in the United States is steadily increasing.

Scientific Farming

Albion Farmer Makes An Envious Record Of Success. Dairy cows are now being produced in the success of C. O. Dalgleish, of Iron Springs, Alberta, who won this year's better farm competition with his big prize of 160 acres. His farm boasts of sheep, high quality of excellent breeds, prize dairy cattle, including a prize two-year-old cow with a registered milk production of 17,000 pounds, and 1,500 head of cattle. The farm is located in the district from Boston, Alberta, in 1927, with practically no capital and with a very small investment. The farm is now a success, and has made an enviable record of success.

The Perfect Interview

French Farmer-Atlantic Fish Gave Best Of Both Worlds. Once upon a time the newspaper interview was new. It began when a reporter, who was a fisherman, went to a farm to interview a farmer. The reporter was a fisherman, and the farmer was a fisherman. The reporter was a fisherman, and the farmer was a fisherman. The reporter was a fisherman, and the farmer was a fisherman.
